

# Generate immediate ATM attention

---

## THE AUDIBLE STROBE ALARM

Deter thieves from attempting to breach the ATM

---

The ATM audible strobe alarm generates immediate attention with the internal and external alarm features of a loud siren and strobe light to deter thieves from attempting to rip the ATM safe open to access the assets inside.

---

## ATM audible strobe alarm features:

The alarm has several key components in addition to the loud siren and strobe light. These include a vibration sensor, independent to the ATM tilt sensor in the control module, and a pressure switch on the back of the strobe, which when removed will set off the alarm providing a secondary backup.

- + Customizable options as standard
- + Universal to any ATM
- + Visible Deterrent
- + Audible deterrent at 100 decibels
- + Compact
- + Magnetic alarm on/off switch supporting engineered alarm modules, including 10 second delay alarm activation and deactivation
- + Alarm rearms itself on closing of the ATM
- + After the 10 second delay and the alarm sounds, the alarm will not reset when the door is closed
- + Internal, independently connected security system
- + Vibration sensor (independent to ATM tilt sensor)
- + Integrates into ATM power supply with battery backup
- + User button is kept hidden and out of sight of thieves

**Add extra protection when combining with the ATM Security Barrier.**

Physical attacks on ATMs continue to rise in the US and around the world as thieves target the vulnerabilities of the machines.

This compact yet powerful device is saving merchants thousands of dollars in unnecessary losses, simply by installing the Cennox ATM Audible Strobe Alarm.
